BYREL

Many Doctors recommend "BYREL" To assist the busy physician in acquainting his patients with the unique simplicity, convenience and effectiveness of "BYREL", the following facts are set down.

Proven formula "BYREL" is the formula of a world-famous gynecologist who has prescribed it in his very extensive private practice among intelligent and careful women for over fifteen years.

Laboratory tests and reports Before "BYREL" was introduced to the general public, such recognized laboratories as The Broad Street Hospital, The Professional Pathological Laboratories, The Bio-Chemical and Pharmaceutical Research Laboratories, all of New York, tested "BYREL" and reported as to its efficient germicidal and antiseptic qualities for feminine hygiene.

Although a destroyer of germ life, "BYREL" is nevertheless entirely non-poisonous, delightfully soothing, stainless, greaseless and delicately scented.

The new one-piece tube Never before has so simple, convenient and hygienic an applicator been devised.

No washing, sterilizing or storing of parts is necessary as the empty tube is discarded after use. Each tube containing a single dose of the vaginal jelly, has a long neck with a safety ball at the tip, making insertion safe and easy. The simplicity, the complete absence of fuss,—in the use of "BYREL", especially recommends it to the discriminating and fastidious woman.

Directions Use "BYREL" while in a reclining position **before** retiring. Remove red cap and moisten the tip with one drop of the jelly. Insert as far as possible with comfort, then squeeze only the large end of the tube while slowly withdrawing it, thereby coating the entire length of the passage. The jelly permeates all the folds and crevices. There is sufficient jelly in the lower bulb end of the tube to accomplish complete antisepsis.

No douche necessary Although a douche may be taken at any time, one great advantage of "BYREL" is the fact that douching is unnecessary. It is beneficial however, for the anti-

HOW TO USE BYREL

Use "BYREL" while in a reclining position BEFORE retiring. Remove red cap and moisten the tip with one drop of the jelly. Insert as far as possible with comfort, then squeeze only the large end of the tube while slowly withdrawing it, thereby coating the entire length of the passage. The jelly permeates all the folds and crevices. There is sufficient jelly in the lower bulb end of the tube to accomplish complete antisepsis.

Although a douche may be taken at any time, one great advantage of "BYREL" is the fact that douching is unnecessary. It is beneficial however, for the antiseptic jelly to remain until the following morning when a cleansing douche may be taken if desired.
