

LEBRAFOAM

A NEW
CONTRACEPTIVE
PREPARATION

Supplied only by
Le Brasseur Surgical Mfg. Co. Ltd.
90, Worcester Street, Birmingham,
England.

LEBRAFOAM is the result of intensive research and scientific experiment by competent authorities in the field of contraceptive methods.

The evolution of LEBRAFOAM was only made possible by reason of a patented "Tube within a Tube," which allows the necessary ingredients to be kept separate until the time of application.

When the contents are extruded, the ingredients meet and mix in the nozzle which is fitted to the tube, resulting in the immediate formation of a ready-made spermicidal foam jelly, which, when placed within the vaginal passage, will penetrate the sulci and fornices, and occlude the os uteri.

In this manner the spermatozoa are not only mechanically prevented from entering the cervical canal, but are also immediately killed by the several powerful spermicides which are definitely harmless to the vaginal mucous membrane.

LEBRAFOAM possesses the following advantages :—

1. LEBRAFOAM gives immediate protection, since it is independent of time, temperature or moisture, and, in this respect, this preparation is an improvement on others.

2. LEBRAFOAM contains several powerful non-irritating spermicides. When the two jellies mix, a copious foam is produced which is still more spermicidal than the individual constituents, and forms a formidable barrier. This unique action can only be attained by means of the patented double compartment tube.

3. LEBRAFOAM does not contain any insoluble material.

4. LEBRAFOAM is colourless, odourless, and does not stain.

5. Douching is unnecessary owing to the choice of constituents, but may certainly be carried out at any time desired.

6. The tubes are made of pure tin internally coated, so that no chemical interaction can take place which might give rise to toxic effects.

7. A preparation of this nature does not deteriorate even under extremes of climatic conditions.

8. The nozzle for application is of correct length and is unbreakable. In the interests of hygiene, a separate nozzle is supplied for each application.

9. LEBRAFOAM is easy to apply, and sufficient material for one application is contained in each tube. The contents are easy to extrude, and after use the tube and nozzle are to be thrown away.

ENTIRELY BRITISH.

ENTIRELY BRITISH.

DIRECTIONS FOR USE.

THE CAP SHOULD NOT BE REMOVED
UNTIL THE TUBE IS PREPARED FOR USE.

1. Remove the cap and cork wad from the tube and tightly screw on the special nozzle, which must be used. The tube may be prepared in advance and the rubber ring should be left on the tube to prevent leakage during use.
2. INSERT THE NOZZLE AS FAR AS IT WILL GO INTO THE VAGINAL PASSAGE, AND SQUEEZE OUT THE CONTENTS OF THE TUBE BEFORE WITHDRAWING THE NOZZLE.

Due allowance is made for a small quantity being left in the tube and the nozzle; after use the complete unit should be rolled up for disposal.

3. LEBRAFOAM acts immediately and hence can, but need not, be applied many minutes before each occasion. Maximum protection is obtained for a long time if this instruction is followed, but the preparation remains active for several hours after it has been applied.
4. Douching may be carried out at *any time* if desired.

Price 5/. per box, six tubes.

Printed in England.

LEBRAFOAM

*The most effective Contraceptive
preparation available.*

LEBRAFOAM is an entirely new type of contraceptive, and is the result of years of research and experimental work by experts in contraceptive methods.

The evolution of **LEBRAFOAM** was only made possible by reason of a patented "Tube within a Tube" which allows the necessary ingredients to be kept separate until the time of application.

When the tube is squeezed, the contents meet and mix in the nozzle which is fitted to the tube, resulting in the immediate formation of a ready-made spermicidal foam jelly, which, when placed within the vaginal passage, will penetrate the sulci and fornices, and cover the os uteri.

In this manner the spermatozoa are not only mechanically prevented from entering the cervical canal, but are also immediately killed by the several powerful spermicides, which are definitely harmless to the vaginal mucous membrane.

It is important that the preparation should spread quickly and fill the numerous crevices within the female passage, so that no male sperm can lurk there and become active at some later time. **LEBRAFOAM** does this due to what is known as low-surface tension, certain special and new ingredients being used to achieve this penetrating effect.

Sufficient material for one application is contained in each tube and in this matter medical experts have been consulted. They have stressed the importance of giving enough for all conditions but on the other hand, some people may find by experience that there is a little too much, and any excess may be wiped away.

The nozzle for application has likewise been approved after numerous tests and can be used without fear of injury. This type bends easily and cannot do any harm.

1. It gives immediate protection, since it is independent of time, temperature or moisture, and thus is an improvement on others.
2. It contains several powerful non-irritating spermicides. When the two jellies mix, a copious foam is produced which is still more spermicidal than the individual constituents, and forms a formidable barrier. This unique action can only be attained by means of the patented double compartment tube,
3. It does not contain any insoluble material and therefore cannot cause irritation.
4. It is colourless, odourless, and does not stain.
5. The tubes are made of pure tin internally coated, so that no chemical interaction can take place, which might give rise to toxic effects.
6. Plain tubes are used to make disposal easy.
7. A preparation of this nature does not deteriorate even under extremes of climatic conditions.
8. The nozzle for application is of correct length and is unbreakable. In the interests of hygiene, a separate nozzle is supplied for each application.
9. It is easy to apply, and sufficient material for one application is contained in each tube. The contents are easy to use and afterwards the complete unit can be rolled up for disposal.
10. Douching may be carried out at **any** time if desired.

Price **5/-** per box containing six tubes,
 Sample tube **1/-** each.
