George's Super Spray

THE WHIRLING SPRAY
OF THE CENTURY

The Super Spray is thoroughly recommended, not only for medicinal injections for such distressing complaints as Leucorrhoea (or Whites), but is extremely efficacious when used with contraceptive solutions such as that made by adding a Dr. Allbutt's Powder to a pint of water. The powerful flushing action smoothes out the folds of the vaginal canal, ensuring that every part receives its quota of the injection.

Sold in a strong polished oak box, with lock and key, the Super Spray represents the last word in the manufacture of whirling sprays, and will give years of satisfied service.

PRICE 21s. post free.

Other Sprays 5/6; 8/6; 10/6; 12/6

Postage 6d. extra.

Page Three.

ALTHOUGH primarily introduced to supersede the Antiseptic Tablets for vaginal douching, these Cachets have many other uses some of which are described in this booklet.

The Solution formed is

ANTISEPTIC — PROPHYLACTIC

DEODORISING

NON-IRRITANT — NON-STAINING

NON-POISONOUS

and the Cachets can be recommended where either one or all the above conditions are desirable.

Unlike the majority of Antiseptic Tablets (which sometimes require crushing or vigorous stirring) these powders dissolve immediately. They will be found a great convenience, especially by those who have experienced the above difficulty.

PERSONAL HYGIENE

VAGINAL DOUCHE For use as an antiseptic or Contraceptive Douche one Cachet should be dissolved in a pint of warm water. This solution is also deodorising and non-irritant and forms an excellent injection for everyday use.

ANTISEPTIC WASH FOR MOUTH AND THROAT Used in the standard solution of one Cachet to a pint of warm water the powders make an antiseptic wash for the mouth and teeth and a gargle for the throat. The deodorising properties of this solution render it extremely useful for sweetening the breath and it leaves the mouth and throat clean and fresh.

During cold and influenza epidemics the same solution can also be used with a nasal douche as a preventive against infection.

ANTISEPTIC

FOR THE FEET As a wash for tired, sore or perspiring feet four Cachets should be added to a basin of warm water. This will be found to give great relief, especially in the hot weather.

IN THE BATH From two to four Cachets added to the bath make it refreshing and invigorating and ensures freedom from infection.

IN THE SICK ROOM

CUTS, WOUNDS AND ULCERS Cuts, wounds, scratches etc, should be carefully bathed with a solution of two Cachets to a pint of warm water. This will thoroughly cleanse the part and assist with rapid healing.

NON-POISONOUS

BITES AND STINGS

A solution of one Cachet in half a tumbler of water to be prepared and applied to the affected parts. This will assist in reducing the swelling and afford speedy relief.

SICK ROOM SPRAY

A solution of one Cachet in a pint of water used as a spray in the sick room or in living rooms in hot weather freshens and purifies the air and reduces the risk of infection.

HOUSEHOLD USES

FOR INFECTED LINEN

If there is any risk of linen being infected through disease it should be washed out in a solution of four

DEODORISING

Cachets to half a gallon of water. This will not damage or stain the material.

Undoubtedly many other uses will suggest themselves, but the Cachets can always be used where a Non-Poisonous Antiseptic is indicated.

PROPHYLACTIC
