

THE NEW SCIENTIFIC CONTRACEPTIVE

Five years ago a group of gynæcologists, disturbed by the evidence of the increasing use of injurious birth control means and methods, set to work to discover one which doctors could recommend with confidence. At the outset they laid down certain essentials :

- It must be non-injurious.
- It must be non-irritant.
- It must be non-toxic.
- It must be reliable.
- It must be simple to use.
- It must be unnoticeable in use.
- It must require no after-effort.
- It must be immediately effective.
- It must not depend upon physiological conditions.

"MIL-SAN" is the final outcome of their work. It meets the demands laid down. It more than meets them, since in addition it is definitely soothing, hygienic and antiseptic. Five years of laboratory work and clinical observation satisfies them it is an efficient contraceptive.

Doctors interested are invited to write for further information.

Investigation is welcomed.
