

ortho-gynol

A SCIENTIFIC PREPARATION
FOR FEMININE HYGIENE

*Directions
for use*

Johnson & Johnson
NEW BRUNSWICK, N. J. CHICAGO, ILL.

• Your doctor recommends it

You have purchased this package of Ortho-Gynol on your doctor's recommendation. To obtain certain results, follow his instructions carefully, also the directions given in this leaflet.

The nature and uses of Ortho-Gynol are described fully to physicians. It is intended that the preparation be used on their prescription or recommendation, whenever they may deem its use necessary or advisable.

• A new and improved formula

The formula of Ortho-Gynol was perfected after years of research in the Johnson & Johnson laboratories. Ortho-Gynol is composed of slowly soluble gums and antiseptic ingredients which are recognized as being adequate for their purpose. Ortho-Gynol thus gives both mechanical and chemical protection.

Before being offered to the medical profession, Ortho-Gynol was thoroughly tested and approved by leading physicians working in metropolitan hospitals.

• Harmless and deodorant

There is nothing in Ortho-Gynol to irritate the sensitive passage to which it is applied. In fact it is soothing and in no sense injurious to the delicate membrane.

Ortho-Gynol gives no offense to aesthetic senses. It is faintly and agreeably scented. Please note that it is entirely free from any trace of sour odor, a disagreeable feature of inferior jellies. It has pronounced deodorant qualities.

• The non-breakable applicator

The new transparent non-breakable applicator is an exclusive Ortho-Gynol feature developed by Johnson & Johnson for this special purpose. It may be cleansed with soap and warm water, and will last indefinitely.

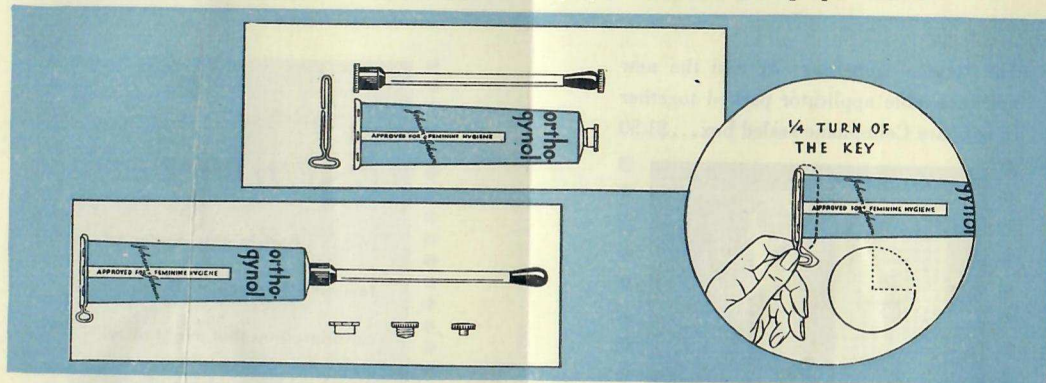

USE BEFORE RETIRING

Apply Ortho-Gynol full-strength before retiring. Its action is prolonged in effect.

Very Important: Do not douche until the following morning. The douche tends to wash away the Ortho-Gynol and thus to defeat the purpose of the applica-

tion. If preferred, a cleansing douche may be used on the morning following. It is not required.

THE PROPER POSITION—Lying on your back is the correct position for using Ortho-Gynol. This helps the preparation to reach the proper location.

DIRECTIONS

1. Remove the caps from the tube and from both ends of the transparent applicator. Attach the applicator by screwing it onto the metal tube.
2. Attach the key to the bottom of the tube and turn until the transparent applicator is filled to the tip. Be sure that the applicator contains no bubbles.
3. Insert the applicator into the vaginal passage as far as it will go with comfort.
4. In this position slowly make at least one quarter of a circle turn with the key (see illustration). Note: If the applicator is not used it will be necessary to use twice as much Ortho-Gynol. Never use less than

the specified amount; there is no harm in using more.

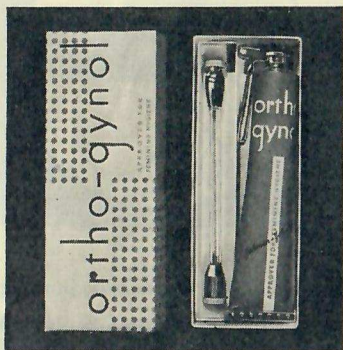

5. To prevent waste, remove the transparent applicator from the metal tube and tightly close *both* ends with the caps provided for the purpose. This also retards the Ortho-Gynol from drying out in the applicator. Before using again be sure that the applicator is filled to the tip with Ortho-Gynol.

6. If used infrequently a slight drying out of the contents may be noted even if the applicator is tightly plugged at both ends. This may be disregarded, as it will not affect the flow of fresh Ortho-Gynol through the applicator.

A TUBE OF ORTHO-GYNOL IS SUFFICIENT FOR APPROXIMATELY TWENTY APPLICATIONS

Johnson & Johnson

The tube of generous size and the new non-breakable applicator packed together in sanitary Cellophane-sealed box...\$1.50

Tube without applicator—\$1.25. Non-breakable applicator in individual box—25c. All packages are protected by Cellophane

Remember

..... that in this matter of
feminine hygiene and in all
considerations that might affect
your health the advice of your
physician is of supreme
importance.
