Remosept

The IDEAL and SAFE

Vaginal Antiseptic Tablets

THESE Tablets have great Antiseptic and Prophylactic properties. They have been on the market for a number of years and are a great advance on the old Quinine and Cocoa-butter Pessary.

There are a number of other vaginal tablets which fail to achieve their purpose on account of their quiescent action. The reason for this lack of success is that the Vagina is not an open, but a closed canal; therefore the medicament is unable to penetrate into the folds of the Vaginal mucous membrane.

The important property of REMOSEPT Tablets is that they most certainly do penetrate into all the folds of the Vaginal canal and cervical mucosa, also the mucous membrane.

To do this thoroughly a highly effervescent preparation is needed and which will release an antiseptic deodorant gas. It has been proved that only a gaseous preparation can reach every corner and crevice of the Vaginal mucous membrane.

This is what we claim in REMOSEPT Tablets, they will do this.

To those who are chemically interested, we suggest a simple and interesting experiment. Place a tablet in a small bottle or glass tube and just cover with water, when a highly contraceptive and close foam will be released, which being used in the ordinary way, will fill every fold of the Vagina. The escaping gas can easily be detected from the bottle or tube. No possible harm can result from inhaling this, as it is perfectly harmless and safe, being the decomposition of a solution of Sodium Dichloryl-sulfamidbenzoate. In addition, we employ another valuable chemical which is now being extensively used for Antiseptic and Contraceptive purposes, and this combination is absolutely lethal to the Spermatoza, Conception being therefore impossible.

We again repeat that this preparation is perfectly harmless to the mucous membrane and other parts, or it would not have been put on the market and taken up by the Medical Profession.

As a preventive, insert one tablet as high as possible five or six minutes before each occasion. If any dryness of the Vagina, dip the tablet momentarily in water before inserting. Within three minutes after the

deposition of the Spermatozoa every living will be rendered innocuous.

It is not in any way essential, for obvious reasons, a warm douche may be soon after or at any rate say, within hours.

In conjunction with the warm douches, REMOSEPT Tablets are a remarkably efficient Vaginal antiseptic in Leucorrhoea, and for that reason alone their use is to be recommended.

Cases of leucorrhoea or discharges of gonorrhoeal or other origin, which have stood resisted treatment with douches, cauterization, etc., have shown rapid improvement and healing under the influence of REMOSEPT TABLETS. In most cases the preparation was applied three times daily, one tablet introduced each time. The quantity of the discharge soon diminished, and the leucorrhoeal condition improved greatly.

REMOSEPT Tablets are the result of exhaustive Laboratory tests by eminent Bacteriological experts, and they are offered to the public as a perfectly harmless and safe contraceptive.
