

Reliable **contraception** at every stage of life.

www.hormonal-iud.info

Reliable contraception at every stage of life.

Very effective long-term contraception.

Consists of a small, soft, plastic T-shaped body.

Releases the hormone Levonorgestrel in very small quantities where it's needed: in the uterus. The dosage is 20-100 times lower than the Pill. The hormonal IUD offers very reliable protection from pregnancy for 3-5 years. Nothing needs to be taken regularly or applied.

After removing the IUD, women can get pregnant in the very first cycle.

As safe as sterilization.

Comfortable and not noticeable.

Can be removed at any time.
